Re: Utility Patent # 10/673,787

Abstract

The new invention is a combination processor and steamer for foods and beverages. The product as a whole clearly replaces the cumbersome procedure commonly used to make soups by combining the ability to steam then process then heat and mix ingredients into one product.

Claims

What I claim is as follows:

1. A product with a housing that could be structured like a stand mixer and common coffee maker enabling the user to process and or steam foods and beverages.
2. Water is sensibly located in a vertical wall allowing for a processing motor and blade to sit underneath food and beverage container/s.
